Statement of Purpose

The purpose of the Installation Action Plan (IAP) is to outline the total multiyear cleanup program for an installation. The plan identifies environmental cleanup requirements at each site or area of concern (AOC), and proposes a comprehensive, installation-wide approach, along with the costs and schedules associated with conducting investigations and taking the necessary remedial actions (RA).

In an effort to coordinate planning information between the restoration manager, the US Army Environmental Command (USAEC), the Army Materiel Command (AMC), the Radford Army Ammunition Plant (RAAP), the executing agencies, regulatory agencies, and the public, an IAP was completed. The IAP is used to track requirements, schedules, and tentative budgets for all major Army installation cleanup programs.

All site-specific funding and schedule information has been prepared according to projected overall Army funding levels and is, therefore, subject to change.

Installation Information

Installation Locale

Installation Size (Acreage): 6900

City: Radford

County: Pulaski and Montgomery Counties

State: Virginia

Other Locale Information

Radford Army Ammunition Plant (RAAP) is located in the western part of Virginia, approximately 40 miles west of Roanoke. It consists of two locations in mountainous terrain: the Main Manufacturing Area (MMA) and New River Unit (NRU). The NRU is located approximately six miles from the MMA, near Dublin, Virginia. The New River flows through the MMA. Land use surrounding the MMA and NRU is primarily agricultural with some residential and industrial use.

Installation Mission

The primary mission of the RAAP is the manufacture of propellants. Since 1968 the RAAP has also produced trinitrotoluene (TNT) on an intermittent basis.

Lead Organization

Army Materiel Command (AMC)

Lead Executing Agencies for Installation

Radford AAP and United States Army Corps of Engineers (USACE), Baltimore District

Regulator Participation

Federal	US Environmental Protection Agency (USEPA), Region III [Resource Conservation and Recovery Act (RCRA) and Office of Superfund]
State	Virginia Department of Environmental Quality (VDEQ), Federal Facilities Restoration Program

National Priorities List (NPL) Status

RADFORD ARMY AMMUNITION PLANT is not on the NPL

Installation Restoration Advisory Board (RAB)/Technical Review Committee (TRC)/Technical Assistance for Public Participation (TAPP) Status

RAB established 199807

Installation Program Summaries

IRP

Primary Contaminants of Concern: Explosives, Metals, Perchlorate, Pesticides, Polychlorinated Biphenyls (PCB), Semi-volatiles (SVOC), Volatiles (VOC)

Affected Media of Concern: Groundwater, Other (Sludge), Sediment, Soil, Surface Water

MMRP

Primary Contaminants of Concern: Munitions constituents (MC)

Affected Media of Concern: Soil

CR

Primary Contaminants of Concern: Asbestos, Dioxins/Dibenzofurans, Metals

Affected Media of Concern: Soil

Cleanup Program Summary

Installation Historic Activity

RAAP is located in the mountains of southwest Virginia in Pulaski and Montgomery counties. It consists of two noncontiguous areas: the MMA and the NRU. The MMA is located approximately five miles northeast of the city of Radford, Virginia which is approximately 10 miles west of Blacksburg and 47 miles southwest of Roanoke. The NRU is located about six miles west of the MMA, near the town of Dublin.

The RAAP lies in one of a series of narrow valleys typical of the eastern range of the Appalachian Mountains. Oriented in a northeast-southwest direction, the valley is approximately 25 miles long, eight miles wide at the southeast end and narrowing to two miles at the northeast end. The RAAP lies along the New River in the relatively narrow northeastern corner of the valley. The New River divides the RAAP into two areas. The Horseshoe Area (which is part of the MMA) lies within a meander of the New River.

The RAAP began manufacturing propellants in 1941 and continues that work today. Since 1968, the RAAP has also produced TNT on an intermittent basis. The working population at the RAAP varies greatly with the mission requirements.

Installation Program Cleanup Progress

IRP

Prior Year Progress: The LTM year three reports were submitted for solid waste management unit (SWMU) 40 and 54. Signs were installed at the NRU LUC sites and some MMA LUC sites.

Future Plan of Action: Comply with the hazardous waste management unit (HWMU) 5 CAP. Negotiate the following: reducing the LTM effort at SMWUs 40, 54 and 49. Continue with LTM at SWMUs 40, 54 and 49. Follow-up on LUCs at SWMUs 40, 41, 43, 45, site screening areas (SSA) 72, 77, 30, 79, and NRU.

MMRP

Prior Year Progress: Installed a sign at the Army Reserve Small Arms Range. Proceed with the procured effort on the former mortar and gun range site for the SI fieldwork and report.

Future Plan of Action: Follow-up on the LUC for the Army Reserve Small Arms Range. Continue to execute the effort for the Former Gun and Mortar Range site. Procure the RFI and LUC effort to complete work on the Former Gun and Mortar Range.

CR

Prior Year Progress: In 2011, obtained approval for the site screening process (SSP) report with no further action (NFA)/LUC recommendation for Compliance-related Cleanup (CC) sites 001, 002, and 003. This is the end point for these sites.

Future Plan of Action: Implement any needed LUC per the SSP report when approved for CC sites 001, 002, and 003. Work with USEPA and VDEQ during the reissuance of the plant's RCRA corrective action permit to ensure these requirements are incorporated.

Date of IRP completion including Long Term Management (LTM): 204509

IRP Contamination Assessment

Contamination Assessment Overview

The initial requirements for the corrective action process were specified in a RCRA permit issued by the USEPA in 1989. In October 2000, the permit, which governs corrective action, was reissued. In October 1992, the first phase of investigations at the SWMUs was completed under the 1989 permit. In some cases SWMUs are grouped together based on similar histories or proximity. Various investigations and actions have been completed since the first phase and submitted to the USEPA and the Commonwealth of Virginia. They are currently reviewing the results of these investigations.

The October 2000 Corrective Action Permit is the USEPA Region III enforceable document to manage the RAAP Installation Restoration Program (IRP) and specific Environmental Restoration, Army (ER,A) eligible sites. The RAAP has separate permits issued by the Commonwealth of Virginia to manage operations pertaining to RCRA Subpart C, D and X. Similarly, the post-closure care permits are the enforceable documents issued by the Commonwealth of Virginia to manage the RAAP IRP and specific ER,A eligible sites.

The primary contaminants of concern (COC) at RAAP include metals and explosives. Groundwater within the RAAP boundaries appears to be affected. Groundwater is believed to eventually discharge to the New River. Current data does not suggest that off-post groundwater has been impacted. Regional efforts are underway to delineate the occurrence and flow of the groundwater. The efforts are complicated due to the presence of karst geology (highly fractured and channelized limestone). Due to the nature of this geology, source removal (clean closure) is the preferred alternative when an action may be required.

Cleanup Exit Strategy

The RAAP, in consultation with the USEPA and the VDEQ, will investigate sites to assess what action, if any, is required to achieve RC. The remaining sites will most likely fall into three broad categories: NFA, source removal, or waste-in-place with LTM.

SITE DESCRIPTION

SWMU 51 is located on a plateau in the southeastern section of the horseshoe area and consists of one unlined trench, approximately 20 ft wide by 200 ft long. From 1968 through 1972, an estimated 10 tons of red water ash was reportedly disposed of in the trench. The trench also was used in the 1970s for disposal of TNT neutralization sludge from the treatment of red water. The pits were backfilled and revegetated.

A 1992 RFI by Dames and Moore evaluated groundwater and soil samples and a CMS was recommended. The soil and groundwater concentrations of COCs exceeded health-based numbers (HBN) in the 1989 RCRA corrective action permit (CORA) and could indicate risk under an industrial worker scenario.

In fiscal year (FY)04 the soil samples for the site-screening process, a quantitative human health risk assessment (HHRA), and a screening-level ecological risk assessment (SLERA) were collected.

Groundwater and soil samples were collected and analyzed for SVOCs, VOCs and explosives to support a quantitative HHRA. Due to the nature of the karst geology, source removal was recommended. During the May 2006 IAP workshop, Department of the Army representatives understood that this site would not be RIP/RC by FY07. In September 2006, a performance-based acquisition (PBA) was awarded with a RIP of September 2009. In 2007 additional samples were collected in accordance with work plan addendum (WPA) 019 that was approved by the stakeholders. The SWMU 51 RFI/CMS Report Final Document, July 2008 was prepared and approved by the stakeholders that contained a recommendation for source removal (clean closure) as groundwater was not affected with LUCs. A follow-on interim measure work plan was prepared and similarly approved to implement this recommendation. The IM effort was completed in 2009. Closeout documentation, the interim measures completion reports (IMCR): SWMU 51, SWMU 39 and Former Lead Furnace Area (FLFA), Final Document, February 2010 was submitted in accordance with (IAW) the CORA. On April 1, 2010 the regulators approved the report and its recommendation of LUC to prevent excavation below 15 ft.

A five-year review effort started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The LTM phase is open to handle LUCs.

The LUCs are to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent excavation below 15 ft. Yearly inspections and periodic reviews are needed.

RIP Date: N/A

RC Date: 201008

SITE DESCRIPTION

SWMU 13 constitutes about 20 acres in the southeast section of the horseshoe area on the northern bank of the New River within the 100-year floodplain. Since manufacturing operations began at RAAP in 1941, the SWMU has been used to burn waste explosives, propellants, and laboratory wastes (propellant and explosive residues, samples and analytical residues). Until 1985 burning was conducted on the soil. Since then burning has been performed in pans.

A 1992 RFI by Dames and Moore evaluated groundwater quality and potential soil contamination for explosives, VOCs, SVOCs, and heavy metals. The concentrations of COCs exceeded HBNs in the 1989 CORA and could indicate risk under an industrial worker scenario.

In FY04, an SSP sampling was performed. The SSP effort identified off-site migration associated with activities before 1986. A final SSP report was submitted in May 2007; it contained a recommendation for further investigation that was subsequently approved on June 7, 2007 by the USEPA and on April 13, 2007 by the VDEQ on an earlier draft. In FY05, in anticipation of those approvals, an RFI/CMS was procured. Also in FY05, a permit was issued by the VDEQ governing burning operations at the open burning ground. A groundwater and soil monitoring program is part of the permit.

In 2008, the WPA 023 RFI work plan for sampling the area from the fence to the river (i.e. outside of the active unit) was prepared and approved by the stakeholders. In November 2008 sampling was performed in accordance with WPA 023. In July 2009 the draft RFI report was submitted. Review comments were addressed. The SWMU 13 RFI Report Final July 2010 addressed the area outside of the permitted unit from the fence to the river [about 30 to 50 ft] which is mostly a steep slope and recommended NFA beyond implementing LUCs to prevent digging in this area. On Aug. 26, 2010 USEPA/VDEQ approved the final RFI report.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

Per the final RFI report, NFA beyond LUC was approved by the regulatory agencies. The LUC is to prevent digging at the site which is a narrow strip of land between the permitted unit and the river.

The LTM phase is open to handle LUC. Yearly inspections and periodic reviews are needed.

Site ID: RAAP-009
Site Name: LANDFILL NITRO AREA (S40)
Alias: SWMU 40

RIP Date:	N/A	
RC Date:	201106	

SITE DESCRIPTION

In the 1970s and early-1980s, SWMU 40, which is approximately 1.5 acres, was reportedly used as a sanitary landfill to dispose of uncontaminated paper, municipal refuse, cement, and rubber tires. Whether hazardous wastes or wastes containing hazardous constituents were ever disposed of in the landfill is not known. Between 1991 and 1992, a fenced enclosure for asbestos storage was constructed over the northeast corner of this SWMU. The unit was strictly an area fill and was covered with soil and grass.

A 1992 RCRA verification investigation (VI) by Dames and Moore attempted to install four monitoring wells which could not be sampled because the four borings were dry. In 1993 and 1994 a dye-trace study was conducted by Engineering-Science in the adjacent area to identify groundwater flow paths in the south-central section of the MMA; however, this site is not believed to affect groundwater. This site and SWMU 71 (RAAP-02) are combined for the RFI. In FY01 a contract to perform a RFI/CMS was procured and in FY03 field investigations were completed. Soil samples were collected to confirm previous investigative results and provide additional data to support a quantitative HHRA and SLERA. A portion (20 cubic yards) of the investigative derived material was determined to be hazardous waste (lead) and was stabilized and disposed of in a permitted treatment storage and disposal facility.

In FY04, the RFI was submitted to the VDEQ and the USEPA for review. In FY05 there were several comment review cycles. Stakeholders agreed that additional sampling was needed to address soil and groundwater data gaps, and in FY06 additional sampling was procured. In 2008 a new RFI/CMS report was submitted. Regulatory comments were addressed and a final RFI/CMS report was submitted in April 2009. It was approved June 30, 2009. In June 2010, a PBA was awarded to implement the CMS recommendation. In December 2010 a work plan was submitted and was approved Aug. 26, 2011 by the USEPA and the VDEQ. RAAP subsequently repaired the cap, installed an additionally groundwater monitoring well and began LTM in accordance with the work plan.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

In 2010 a PBA was awarded to implement the RFI/CMS remedy. A follow-on PBA was awarded in 2014. LUC and LTM are anticipated.

The LTM phase is also to handle LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent residential use.

Site ID: RAAP-011

Site Name: RED WATER ASH BURIAL GROUND (S41)

Alias: SWMU 41

STATUS

Regulatory Driver: RCRA

RRSE: HIGH

Contaminants of Concern: Explosives, Metals, Semi-volatiles (SVOC)

Media of Concern: Groundwater, Soil, Surface Water

Phases	Start	End

CS.....	198410.....	198412
RFI/CMS.....	200207.....	201109
CMI(C).....	201103.....	201109
LTM.....	201109.....	204509

RIP Date: N/A

RC Date: 201109

SITE DESCRIPTION

SWMU 41 is located in the MMA and consists of two noncontiguous disposal areas for red water ash. The northern area (41A) consisted of an unlined lagoon approximately 50 ft by 70 ft, which was backfilled. The southern area (41B) consisted of a clay-lined disposal area approximately 100 ft by 150 ft. Prior to construction of the red water treatment plant, red water was concentrated by evaporation and burned in four rotary kilns located in the TNT manufacturing area. From 1967 to 1971 the ash produced from these kilns was disposed of in SWMU 41B.

A 1992 RCRA VI by Dames and Moore included the collection and analysis of groundwater samples near the landfill, ash and soil samples from the lagoon north of the landfill, and a surface water sample from Stroubles Creek.

Data from the VI indicate explosives and metals in the soil and SVOCs and metals in the groundwater above 1989 RCRA CORA permit HBNS. The soil samples for the SSP, a quantitative HHRA and a SLERA, were collected in FY04.

In September 2006 a PBA was awarded with a RIP date of September 2009. In 2007, additional samples were collected in accordance with WPA 019 that was approved by the stakeholders. In December 2009, a draft RFI report was submitted. In the process of addressing regulatory comments, a well was installed and sampled at 41A in October 2010. Data from the effort supports NFA at 41A. LUC was recommended for 41B to prevent residential use. A revised SWMU 41 RFI, Final Document, February 2011 was submitted in February 2011 with the same recommendations and approved March 23, 2011 by the USEPA and the VDEQ.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

Per the RFI report and 2010 41A groundwater data, NFA was obtained for SWMU 41A and LUC at SWMU 41B.

The LUC is to maintain SWMU 41B in its current commercial/industrial state as a closed SWMU and to prevent residential use. LTM is open to address the LUC at SWMU 41B. Yearly inspections and periodic reviews are needed.

The site is included in the PBA that was awarded in 2006.

Site ID: RAAP-013
Site Name: RED WATER ASH BURIAL #2 (S49)
Alias: SWMU 49

STATUS

Regulatory Driver: RCRA

LTM.....	201406.....	204509
RIP Date:	N/A	
RC Date:	201405	

SITE DESCRIPTION

SWMU 49 is approximately 75 ft by 50 ft and is located in the horseshoe area, contiguous with SWMUs 48, 50, and 59. The four SWMUs were classified together during the 1980s because a distinction could not be made between the areas by visual observation. SWMU 48 was later divided into an upper and a lower disposal area, and SWMU 49 was determined to be part of the SWMU 48 lower disposal unit. SWMU 49 reportedly received 10 tons of red water ash during its active life.

A 1992 RCRA VI by Dames and Moore and a 1996 RFI by Parsons Engineering-Science were conducted to determine the impacts to groundwater quality and soil. A 1999 draft RFI by ICF Kaiser included the verification of previous RFI results. Metals, VOCs, and SVOCs were detected above 1989 RCRA CORA permit HBNS.

The RFI sampling was completed in FY02. In September 2006, a PBA was awarded with a RIP of September 2009 at SWMUs 49, 48, 50, and 59, which are close to each other. In 2007, additional samples were collected in accordance with WPA 019 that was approved by the stakeholders. In February 2009 a draft RFI/CMS report was submitted. Regulatory review comments are being addressed via an IM (source removal) at SWMU 48 and subsequent submittal of a revised RFI/CMS report. To that end a SWMU 48 IM work plan was approved by USEPA and the VDEQ on July 20, 2011 with subsequent execution from July 2011 through February 2012.

RFI/CMS report was submitted in June 2012 to USEPA and VDEQ. USEPA and VDEQ comments on the RFI/CMS were sent on Nov. 5, 2012. After various discussions the document was edited to incorporate responses to comments and resubmitted as SWMUs 48 and 49 RFI Report, Draft Document, January 2014 to the regulators on Jan. 14, 2014 which recommended NFA at SWMU 48, and LUC and LTM for VOCs, primarily carbon tetrachloride and trichloroethylene (TCE) in groundwater at SWMU 49. The USEPA and VDEQ approved the RFI on May 30, 2014. Due to the contiguous nature of SWMU 49 (RAAP-013) and SWMU 48 (RAAP-018), SWMU 49 is tracking costs for both of these sites.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The RFI outlines the effort needed to address this site.

Due to the contiguous nature of RAAP-013 (SWMU 49), RAAP-018 (SWMU 48), RAAP-025 (SWMU 50), and RAAP-028 (SWMU 59), local groundwater issues are to be addressed under a monitored natural attenuation (MNA)/LTM plan for RAAP-013 (SWMU 49). Source removal was previously performed at RAAP-018 (SWMU 48), as these two sites are thought to be the likely source areas.

Site ID: RAAP-013
Site Name: RED WATER ASH BURIAL #2 (S49)
Alias: SWMU 49

NFA for soil was attained at RAAP-13 (SWMU 49) and NFA for soil at RAAP-018 (SWMU 48) was attained through source removal. MNA/LTM is needed for groundwater at and in the vicinity of RAAP-013 (SWMU 49) and RAAP-018 (SWMU 48).

The LUC is to maintain SWMU 49 in its current industrial/commercial state as a closed SWMU and to prevent residential use. Yearly inspections and periodic reviews are needed.

The site is included in the PBA that was awarded in 2006 and a follow on PBA that was awarded in 2014.

RIP Date: N/A

RC Date: 201109

SITE DESCRIPTION

SWMU 54 is an inactive disposal area situated on approximately five acres within the easternmost section of the horseshoe area. This SWMU was used during the 1970s to dispose of the propellant burning ground (SWMU 13) ash.

A 1992 RCRA VI by Dames and Moore, a 1996 RFI by Parsons Engineering-Science, and a 1997 Supplemental RFI by ICF Kaiser were conducted. Soil and groundwater samples were taken in these efforts. Soil data indicates the presence of metals and VOCs and explosives exceeding the 1989 RCRA CORA permit HBNS.

A 1999 interim removal action was performed by Parallax to remove hot spots associated with lead.

A contract to perform an RFI/CMS was procured in FY01. Clean closeout will mitigate long-term monitoring and long-term operation liability. From FY03 through FY06 RFI sampling was conducted. More sampling is needed per the March 29, 2006 to March 30, 2006 meeting of RAAP, USAEC, USACE, US Army Center for Health Promotion and Preventive Medicine (USACHPPM), VDEQ and USEPA. In FY06 additional sampling was procured and the field effort was completed in fall 2007. The SWMU 54 RFI/CMS Report, Final September 2008 was prepared and approved by the USEPA and the VDEQ on Oct. 16, 2008. The report recommended source removal (clean closure) to prevent further leaching to groundwater and allow for continued MNA. In 2010 the source removal effort was physically complete. In 2011 the source closeout report and MNA work plan were submitted. On April 11, 2011 the MNA work plan was approved by the USEPA and the VDEQ. On July 11, 2011 the source closeout report, aka Interim Measures Completion Report, was approved by USEPA and the VDEQ. The MNA LTM and LUC effort continues.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The RFI/CMS report approved by the regulatory agencies contained a recommendation for source removal (clean closure) to prevent further leaching to groundwater and allow for MNA with LTM. In 2009 and 2014, an initial and follow-on PBA was awarded to implement this remedy.

RC Date: 201201

SITE DESCRIPTION

This unit is contiguous to SWMU 49 (red water ash disposal area), SWMU 50 (calcium sulfate disposal area), and SWMU 59 (bottom ash pile). An estimated 200,000 gallons or more of oil contaminated wastewater were disposed of in unlined trenches at this unit prior to the off-plant recycling of used oil.

A 1992 RCRA VI by Dames and Moore and a 1996 RFI by Parsons Engineering-Science were conducted to evaluate potential groundwater contamination. Four monitoring wells were installed and sampled. Soil data from the VI indicated the presence of metals and explosives above 1989 RCRA CORA permit HBNS. Groundwater data from the VI indicated the presence of chlorinated solvents and metals above 1989 RCRA CORA permit HBNS.

In 1999 a draft RFI was submitted by ICF Kaiser. Soil data from the RFI indicated the presence of metals above 1989 RCRA CORA permit HBNS. In FY02 the RFI sampling was completed. In September 2006, a PBA was awarded with a RIP of September 2009 at SWMUs 49, 48, 50, and 59, which are in proximity to each other. In 2007, additional samples were collected in accordance with WPA 019 that was approved by the stakeholders. In February 2009 a draft RFI/CMS report was submitted. Regulatory review comments are being addressed via an IM (source removal) at SWMU 48 and subsequent submittal of a revised RFI/CMS report. To that end a SWMU 48 IM work plan was approved by USEPA and the VDEQ on July 20, 2011 with subsequent execution from July 2011 through February 2012. RFI/CMS report was submitted in June 2012 to USEPA and VDEQ. Later this effort was combined into the SWMU 48 and 49 RFI report which recommended NFA for the soil at SWMU 48 and MNA/LTM for the groundwater in the vicinity of SWMUs 48 and 49. The USEPA and VDEQ approved the RFI on May 30, 2014.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The RFI outlines the effort needed to address this site.

Due to the contiguous nature of RAAP-013 (SWMU 49), RAAP-018 (SWMU 48), RAAP-025 (SWMU 50), and RAAP-028 (SWMU 59), local groundwater issues are to be addressed under a MNA/LTM plan for RAAP-013 (SWMU 49). Source removal was previously performed at RAAP-018 (SWMU 48), as these two sites are thought to be the likely source areas.

NFA for soil was attained at RAAP-13 (SWMU 49) and NFA for soil at RAAP-018 (SWMU 48) was attained through source removal. MNA/LTM is needed for groundwater at and in the vicinity of RAAP-013 (SWMU 49) and RAAP-018 (SWMU 48).

Site ID: RAAP-018
Site Name: OILY WATER BURIAL AREA (S48)
Alias: SWMU 48

The LUC is to maintain SWMU 49 in its current industrial/commercial state as a closed SWMU and to prevent residential use. Yearly inspections and periodic reviews are needed.

The site is included in the PBA that was awarded in 2006 and a follow-on PBA that was awarded in 2014.

Site ID: RAAP-023
Site Name: SANITARY LANDFILL NO.2 (S43)

RIP Date: N/A

RC Date: 201101

SITE DESCRIPTION

SWMU 43 is a closed, unlined sanitary landfill of approximately two acres, located immediately adjacent to the New River in the northeast section of the RAAP MMA. It operated from 1958 to 1969. The exact boundaries of the unit have not been determined because of the unavailability of a site plan or documents. The site was regraded in accordance with a VI recommendation. A 1992 RCRA VI by Dames and Moore installed six groundwater monitoring wells. Groundwater and surface water data indicates the presence of metals and VOCs which did not exceed 1989 RCRA CORA permit HBNs.

In September 2006, a PBA contract was awarded to produce an RFI/CMS by September 2009. The SWMU 43 RFI Report Final Document January 2011 was submitted and recommended NFA beyond LUCs. The regulators approved this report on Jan. 28, 2011.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

Per the final RFI report NFA beyond LUC was approved by the regulatory agencies. The LTM phase is open to handle LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent residential use. Yearly inspections and periodic reviews are needed.

The site is included in the PBA that was awarded in 2006.

RIP Date: N/A
RC Date: 201003

SITE DESCRIPTION

SWMU 45 is an inactive sanitary landfill of approximately five acres, located in the north-central section of the MMA. It operated between 1957 and 1961. The unit was never operated as a permitted landfill. Paper and municipal refuse were the only materials reportedly disposed of in SWMU 45. Evidence of burning has been observed in the area.

A 1992 RCRA VI by Dames and Moore included monitoring well installation, a geophysical survey, and a baseline HHRA.

An SSP was procured in FY05. In late FY06, stakeholders agreed to the procurement of a geophysical delineation and groundwater assessment.

In 2007 additional samples were collected in accordance with WPA 022 that was approved by the stakeholders. In 2009 a draft SSP which recommended NFA was submitted and regulatory comments were addressed. The SWMU 45 SSP Report Final January 2010 was submitted which recommended NFA beyond LUCs. LUC would be to maintain the site in its current commercial/industrial state as a closed SWMU and to prevent residential use. This report was approved by the USEPA and VDEQ on March 29, 2010.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The LTM phase is open to handle LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent residential use. Yearly inspections and periodic reviews are needed.

RIP Date: N/A

RC Date: 200210

SITE DESCRIPTION

HWMU 16 covers about two acres and is located in the horseshoe area of the plant between RAAP-007 (SWMU 28, Permit 401) and RAAP-029 (SWMU 52, Permit 401). The site is a landfill, closed in the early-1980s, which was used for lab chemicals and incinerator residue and as a burning ground.

Groundwater data indicates the presence of elevated concentrations of explosives and chlorinated solvents. There are indications that the groundwater contamination at HWMU 16 is migrating to the areas of SWMU 28 and 52.

In October 2002, a post-closure care permit (PCCP) requiring LTM and LUCs was issued by the VDEQ.

On May 29, 2007 the RAAP submitted a Class 1 minor modification request for LTM reduction to the VDEQ which was approved on June 14, 2007.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014

CLEANUP/EXIT STRATEGY

LTM is planned for 30 years as the post-closure requirement is for 30 years or site closeout. Wells will be sampled as required in the post-closure permit. Yearly inspections and periodic reviews are needed.

CS.....	198410.....	198412
RFI/CMS.....	200010.....	200210
LTM.....	200210.....	204503

RIP Date: N/A

RC Date: 200210

SITE DESCRIPTION

HWMU 5 is located in the middle of the MMA. It was a surface impoundment used for acidic wastewaters. Sludge was removed, but contaminated soil below the sludge layer was left in place. The lagoon was filled and capped. The presence of residual waste precludes clean closure.

Groundwater monitoring has been performed for the past 15 years. Dinitrotoluene and TCE were detected in groundwater. TCE exceeded groundwater protection standards. In FY04 an alternate source demonstration (ASD) report for TCE was resubmitted to VDEQ.

In the fall of 2002, an investigative effort was completed for HWMUs 5 and 7. The subsequent draft "Field Investigation Report and Risk Assessment for HWMUs 5 and 7 (DAA 2003)" was submitted to the VDEQ. This report was to facilitate elimination LTM. In October 2002 a PCCP, LTM and LUCs, was issued by the VDEQ.

In 2007, several documents were submitted to the VDEQ to reduce or eliminate LTM; one of the documents was an ASD for TCE, later formalized in a multi-site permit modification request. The VDEQ review comments indicated that the ASD could not be approved with the current data because the TCE source was not identified. Soil data did not show TCE within and below HWMU 5, so there was merit in pursuing an ASD. A new site, RAAP-047 was created to address TCE issues in the vicinity and to prepare and resubmit the HWMU 5 ASD. In February 2008, a PBA was awarded to achieve a HWMU 5 ASD by March 2009.

Two sampling events occurred during May and July 2008 IAW WPA 025 that was approved by the stakeholders. Over the summer of 2008 several stakeholder discussions of the preliminary data and assessments occurred. It was concluded that an ASD could not be approved for TCE at HWMU 5; therefore, the process to modify the PCCP for HWMU 5 was begun to incorporate a CAP. In December 2008 a draft CAP was prepared and put in public notice that proposed MNA/LTM as the cleanup remedy; however, the data and assessments did indicate that NFA was appropriate for RAAP-047. On Nov. 5, 2009 VDEQ approved the HWMU 5 CAP for MNA/LTM.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

On Nov. 5, 2009, the VDEQ approved the HWMU 5 CAP for MNA/LTM.

LTM is planned for 30 years as the post-closure requirement is for 30 years or until clean closure has been demonstrated through the CAP and the PCCP. Yearly inspections and periodic reviews are needed.

The site is included in the PBA that was awarded in 2008.

RIP Date: N/A

RC Date: 201109

SITE DESCRIPTION

The NRU is located approximately six miles west of the RAAP MMA and consists of approximately 2,813 acres. Between 1940 and 1945 the NRU was used to load propellants and igniter charges and to manufacture igniter charge bags. Between 1943 and 1945 operations were expanded to include an additional bag-loading line, rolled powder operations, flash-reducer loading lines, and black powder drying facilities. Production ended after World War II, and the plant was officially designated as part of the RAAP installation. Since 1947, approximately 1,000 acres in the western section of the plant have been sold or transferred for other uses.

There is conductive flooring in several buildings. The material is made of barium, copper, asbestos, and lead. It is exposed to the elements and is leaching to surrounding soil.

An RI sampling effort included the collection of surface soil, sludge, and water samples. Metals have been detected in excess of the 1989 RCRA CORA permit HBNs; however, this site is not subject to any RCRA CORA permit. Six areas within the NRU are being investigated:

- Bag Loading Area (BLA),
- Igniter Assembly Area (IAA),
- Northern Burning Ground (NBG),
- Western Burning Ground (WBG),
- Rail Yard (RY), and
- Building Debris Disposal Trench (BDDT).

In FY02 the RI fieldwork was completed. In FY04 effort from the work instructions was performed. In an e-mail dated Feb. 16, 2007, the USAEC confirmed that the BLA and IAA are eligible for ER,A funding. In FY06, the USAEC decided to implement a PBA at the NRU. In February 2008, a PBA was awarded to achieve RC by August 2010.

In 2008 draft WPA 027 was submitted to the VDEQ. The VDEQ is the sole regulatory review agency and provided comments but formal approval has not occurred. In any case, sampling was performed in accordance with WPA 027 during summer 2008.

In 2009 an Engineering Evaluation/Cost Analysis (EE/CA) removal action was completed at the NBG and NFA was achieved.

In November 2009 a draft RI/FS document was submitted for the remaining five areas and groundwater. On July 30, 2010 the final RI report was approved. On Oct. 22, 2010 the final FS report was approved. A public comment period on the proposed plan was held from Sept. 26 through Oct. 26, 2010. A public meeting was held on Oct. 19, 2010. Public comments are to be addressed during the preparation of the final decision document (DD). The proposed plan was approved Dec. 13, 2010. In November 2010 a final RA work plan was submitted and RA started at that time and completed in May 2011. VDEQ approved the IAA and BLA work plan on Dec. 9, 2011 and the WBG work plan on April 27, 2011. The results of the effort was that NFA was achieved at the WBG

Site ID: RAAP-044
Site Name: NEW RIVER UNIT
Alias: NRU

and the RY and LUCs are to be implemented at IAA, BLA, and BDDT to maintain them in their current industrial/commercial as closed sites and to prevent residential use.

The Final DD for RAAP NRU, November 2011, reflects that the above was signed by the USAEC in April 11, 2013. VDEQ concurred July 24, 2013.

CLEANUP/EXIT STRATEGY

The RA followed the approved RI and FS reports for the RY, BLA, IAA, WBG and BDDT. RY is NFA. Excavation, transportation and disposal of contaminated soil and conductive flooring has occurred at the BLA and IAA. Focused sediment removal and disposal has occurred at the WBG pond.

In 2009 an EE/CA removal action was completed at the NBG, and NFA was achieved.

LTM phase is open to handle LUC.

The LUC (IAA, BLA, BDDT) is to maintain the site in its current industrial/commercial state as a closed site and to prevent residential use. Yearly inspections and periodic reviews are needed.

The site was included in the PBA that was awarded in 2008.

A DD was signed by USAEC in April 2013 that reflects the above.

Site Closeout (No Further Action) Summary

Site ID	Site Name	NFA Date	Documentation

SWMU 75: VDEQ letter of Oct. 3, 1995 and USEPA approval of Work Plan Addendum 16 on Sept. 8, 2003; SWMU 76: VDEQ letter of Aug. 28, 1992 and USEPA approval of Work Plan Addendum 16 on Sept. 8, 2003. In accordance with the RCRA CORA Permit, a decision document for no further action was submitted in August 2007 for SWMUs 75 and 76 and was approved by USEPA Sept. 21, 2007 and VDEQ Oct. 1, 2007.
RAAP-033	CHROMIC ACID TREATMENT TANKS (S68)	200710	A final Site Screening Process

Site Closeout (No Further Action) Summary

Site ID	Site Name	NFA Date	Documentation
			(SSP)report was submitted in May 2007 that contained a recommendation for no further action, which was subsequently approved by USEPA June 7, 2007 and VDEQ April 13, 2007. A subsequent NFA Decision Document was approved by USEPA Sept. 21, 2007 and VDEQ Oct. 1, 2007
RAAP-035	SEWAGE LINES	200205	Sewer system work plan, electronic data disk, line inspection and manhole reports 35 video tapes, etc. were submitted to USEPA and VDEQ on Jan 23, 2003. Not eligible for ER,A funding
RAAP-036	BIOPLANT BASIN (S10)	199812	Clean-closed for soils and groundwater is monitored according to post-closure permit for HWMUs 5, 7, 10, and 16. Not eligible for ER,A funding
RAAP-037	BATTERY STORAGE AREA (P)	201011	In 2010 a final RFI Report was submitted which recommended NFA. It was approved Nov. 4, 2010.
RAAP-038	UNDERGROUND FUEL OIL SPILL (O)	200904	In 2008 a draft RFI/CMS report was submitted. Based on that report, the stakeholders agreed that this site should be closed out under the VDEQ Oil Program. On March 3, 2009 VDEQ approved NFA for this site. On April 29, 2009 USEPA stated that NFA would be issued under the RCRA CORA permit.
RAAP-040	FORMER LEAD FURNACE AREA	200909	Interim Measures Completion Reports: SWMU 51, SWMU 39 and FLFA, Final Document February 2010, approved by USEPA April 1, 2010
RAAP-041	SURFACE IMPOUNDMENT #4 (HWMU #4)	200809	On June 28, 2007, RAAP submitted a closure evaluation and requested clean closure for groundwater such that the post closure care period could be terminated. On Aug. 16, 2007, the VDEQ concurred that clean closure for groundwater had been achieved and advised RAAP to discontinue remaining post closure activities.
RAAP-043	SURFACE IMPOUNDMENT #7 (HWMU #7)	201306	Additional data was collected in the fall of 2012 and a closure report addendum was submitted in January 2013. VDEQ review and action was completed on June 26, 2013 where it was approved to discontinue groundwater monitoring and HWMU 7 will be removed from the post-closure care permit that is to be reissued.
RAAP-045	FORMERCADMIUM PLATING FACILITY(BLDG 4343)	200709	Final RFI/CMS was submitted in FY04 and was approved by USEPA on Aug. 16, 2004 and by VDEQ (draft) on Aug. 28, 2003. In FY06, the interim measures work plan was prepared in accordance with the RFI/CMS and was approved by the

MMRP Contamination Assessment

Contamination Assessment Overview

In May 2003 the Phase III Army range inventory was completed at RAAP. The Phase III inventory serves as the preliminary assessment under the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA). One site was identified as eligible for the Military Munitions Response Program (MMRP). In October 2006 an SI was initiated. In January 2008 a historical records review was completed. In 2009 a PBA was awarded to complete the RFI/CMS and contains options for future effort as needed.

Cleanup Exit Strategy

The cleanup/exit strategy includes the completion of a combined interim measures RA and RFI/CMS effort from the 2009 PBA. The RA includes source removal (soil excavation and off-site transport); it is ongoing and is being implemented as an IM as part of the RFI/CMS field effort. RA may eventually include MNA and LTM at the completion of the RFI/CMS.

RC Date: 201401

SITE DESCRIPTION

The closed Army Reserve Small Arms Range occupied approximately 7.6 acres which was used for small arms training from about 1941 to 1967. This closed range is located along the southeastern boundary of RAAP. A berm (approximately 200 ft long by 10 ft high) is still present and indicates that the direction of fire was southeast. The berm is adjacent to a stream which forms the installation boundary. This range most likely contained between 10 and 15 stations. The Radford ordnance works historic investigation states that 155,375 rounds of ammunition were "expended in the pistol range by the RAAP police department from October 1941 to October 1945." From 1946 to 1967 the local rifle club also may have used the range.

The former small arms range is not within the secure limited manufacturing area, but public access is restricted. The range is currently a grass field surrounded by an unlocked fence. It was once used as a baseball field and until the late-1960s it was accessible to the public. In 2009, a PBA was awarded to complete the RFI/CMS and contains options for future effort as needed. In June 2010 a draft work plan for a combined IMs and RFI/CMS was submitted. A final work plan was submitted on April 1, 2011 and was approved by USEPA and the VDEQ on April 11, 2011. The IM effort was completed and consisted of source removal. RFI/IM report was submitted in February 2012 to USEPA and VDEQ. The report, Army Reserve Small Arms Range RFI/IM Completion Report, Final Document, November 2013 was revised to address their comments and was resubmitted in early December 2013. It was approved by USEPA and VDEQ on Jan. 14, 2014. It recommended LUCs for the southeast hillside portion of the site.

CLEANUP/EXIT STRATEGY

The cleanup/exit strategy includes the completion of a combined IMs, RA, and RFI/CMS effort from the 2009 PBA.

The initial RA was executed as a limited source removal (soil excavation and off-site transport) as part of the RFI/CMS field effort.

A LUC is anticipated for part of the site to prevent residential use. Yearly inspections and periodic reviews are needed.

RIP Date: N/A
RC Date: 201709

SITE DESCRIPTION

The site is made up of two adjacent areas the "Gun Range Area" (28 acres) and "Trench Mortar Range Area" (85 acres) that were apparently operational during WWII. The site is within and perhaps underneath the Nitroglycerin 2 and Automated Multi-Base Area. Only the Nitroglycerin 2 area is active, the Automated Multi-Base Area was built and never went into production and is being scrapped. Currently procedure when mortar rounds are found through excavation or wash out is to call Explosive Ordnance Detachment (EOD). In April 2012, a 4.2- inch white phosphorus and 60mm high explosive rounds were detonated by the 18th EOD from Ft. Bragg. There were sporadic, undocumented finds over the years of inert rounds. An SI effort was awarded in 2014 and that effort is expected to be complete in 2016.

CLEANUP/EXIT STRATEGY

An SI effort was awarded 2014 and is expected to be complete with regulatory approval in 2016.

RFI/CMS and LUC for safety management are the only future efforts anticipated at this time and would continue indefinitely. Yearly inspections and periodic reviews are anticipated. The LTM phase is open to handle the LUC.

RC Date:	201101	

SITE DESCRIPTION

SSA72 was identified during the 1987 USEPA RFA and was subsequently put into the 2000 CORA permit. It is a sump in the Oleum Plant Area that received acidic wastewater. An SSP effort was conducted IAW the CORA. The Final SSP Report for SSAs 18, 72, 30, 79, 60, and 77, December 2010, was submitted that recommended NFA with LUC. The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. The regulators approved this report on Jan. 28, 2011.

A five-year review effort was started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The LTM phase is open to handle the LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. Yearly inspections and periodic reviews are needed.

SITE DESCRIPTION

SSA77 was identified during the 1987 USEPA RFA and was subsequently put into the 2000 CORA permit. It is an old garbage incinerator that operated from the 1940s until 1974. An SSP effort was conducted IAW the CORA. The Final SSP Report for SSAs 18, 72, 30, 79, 60, and 77, December 2010, was submitted that recommended NFA with LUC. The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. The regulators approved this report on Jan. 28, 2011.

A five-year review effort started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The LTM phase is open to handle the LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. Yearly inspections and periodic reviews are needed.

Site ID: CC-003

Site Name: Asbestos Disposal Trenches 1 and 2

Alias: SSA 30 79

SITE DESCRIPTION

SSAs 30 and 79 were identified during the 1987 USEPA RFA and was subsequently put into the 2000 CORA permit. Asbestos Disposal Trenches 1 and 2 were used for disposal of asbestos containing material. An SSP effort was conducted IAW the CORA. The Final SSP Report for SSAs 18, 72, 30, 79, 60, and 77, December 2010, was submitted that recommended NFA with LUC. The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. The regulators approved this report on Jan. 28, 2011. A five-year review effort started in November 2012 by the USACE and a site visit was conducted in May 2013. The report was completed in March 2014.

CLEANUP/EXIT STRATEGY

The LTM phase is open to handle the LUC.

The LUC is to maintain the site in its current industrial/commercial state as a closed SWMU and to prevent future residential use. Yearly inspections and periodic reviews are needed.

Community Involvement

Technical Review Committee (TRC): None

Community Involvement Plan (Date Published): 200401

Restoration Advisory Board (RAB): RAB established 199807

RAB Adjournment Date: N/A

RAB Adjournment Reason: None

Additional Community Involvement Information

The surrounding community for RAAP includes the counties of Montgomery [2004 Population (Pop.) 83,959], Pulaski(2004 Pop. 35,152), Floyd (2004 Pop. 14,464), and Giles (2004 Pop. 16,989) and the city of Radford (Pop. 15,940).

In February 1995 and January 1998, surveys were conducted to determine if there was enough community interest to sustain a RAB. In September 1995 a community involvement plan (CIP) was finalized and last updated in 2004.

In February 1995 and January 1998, RAAP, with the assistance of USAEC, conducted community interviews with residents of the surrounding counties and the city of Radford and placed two newspaper advertisements soliciting community members to volunteer for RAB positions.

In June 1998, RAAP held a public meeting to share information about the RAAP cleanup program and about forming a RAB.

In August 1998, consistent with a RAB recommendation, RAAP held the first RAB-style meeting. A community co-chair person was selected and in September 1999 an information repository was established at the Christiansburg Branch of the Montgomery Floyd Regional Library.

RAB activities to date have included quarterly meetings with regulators present, plant tours, and project and program status briefings.

The RAAP is committed to involving the public in the restoration program and will do everything necessary to make it a success.

Just prior to the FY11 data call, the CIP was reviewed by RAAP's Public Affairs Office and subsequently concluded that updates were not needed.
